

A five-minute training Series for Pest Management Professionals.

Summer Thunderstorms

Name _____

Date _____

True

False

1) It is best to lay flat on the ground in a deep ditch to avoid being struck by lightning.

2) A thunderstorm that has a count of 30 seconds or less between visible lightning and the thunderclap is close enough to pose hazards.

3) Heavy rains can increase road hazards by impairing your visibility and compromising the condition of the road surface.

4) Leaning forward but remaining on your feet and avoiding tall objects is a good way to lessen your chance of being struck by lightning if caught outside during a storm.

5) Pull off the road and park in a deep drainage ditch during a heavy rain to protect your vehicle from high winds and possible hail damage.
