|--|--------------------------|--------------------------|
| 1. Loading and unloading a ladder from your truck, if done improperly, can produce a strain injury to the back or shoulders.   | <input type="checkbox"/> | <input type="checkbox"/> |
| 2. Aluminum extension ladders present little hazard from strain injuries because the material they are made from keeps them lightweight and easy to handle.  | <input type="checkbox"/> | <input type="checkbox"/> |
| 3. Clearing your path of travel from your truck to your ladder setup location will help prevent a trip and fall while carrying a ladder.   | <input type="checkbox"/> | <input type="checkbox"/> |
| 4. Resting one end of the ladder on the ground as you load and unload the ladder to and from the mounts is a good way to avoid handling the total weight before you are able to grasp the ladder in the center and close to your body. | <input type="checkbox"/> | <input type="checkbox"/> |
| 5. Overhead electrical lines can pose a significant threat when setting up or moving an extension ladder.  | <input type="checkbox"/> | <input type="checkbox"/> |
